Photonic Shield

Ear Pods Test

My Brief

As a qualified naturopath and live blood microscopist of 22 years, I have been asked to test the Photonic EMF Protection Shield for effectiveness against Wireless Ear Pods radiation and the effect on red blood cells.

The report below highlights my findings based on my research.

Test Structure and Timeline

Test subject arrived hydrated, 500 mls water consumed prior to arrival

Light breakfast consumed

No device used prior to the test starting

08.00 Room orientation phase to settle test subject into environment

09.00 First blood sample taken (photos and video)

09.15 20-minutes of Smart Watch use (without Photonic Shield)

09.45 Second blood sample taken (photos and video)

09.55 20-minutes of Smart Watch use (with Photonic Shield)

10.15 Third blood sample taken (photos and video)

10.45 Test complete

First Blood Sample

Baseline

Peripheral blood sample taken after test subject sat quietly in the room for one hour in order to settle the body into the environment.

Blood Parameters

Healthy blood picture across sample

Healthy cell membranes

Clean plasma

Red blood cells free flowing

First Blood

First Blood Sample - Video

Second Blood Sample

EMF Stressed

Peripheral blood sample taken after test subject listened to music wearing wireless Ear Pods for 20 minutes. Photonic Shield was **not** used.

Blood Parameters

Severe rouleaux (stacking of red blood cells)

Erythrocyte aggregation

Loss of Zeta Potential

Blood flow inhibited

Third Blood Sample

Photonic Square Protection

Peripheral blood sample taken after test subject listened to music wearing wireless Ear Pods for 20 minutes. Photonic Shield was placed in the trouser pocket of test subject.

Blood Parameters

Improved blood picture across sample
(superior to Baseline)

Rouleaux no longer present

Erythrocyte aggregation no longer present

Zeta Potential restored

Red blood cells free flowing

Third Blood
